Course Rationale :	The rapid growth of web technologies has transformed how people access information, services, and applications. Modern web development requires not only proficiency in markup and styling but also strong skills in client-side scripting, interactivity, and performance optimization. This course introduces Students to the end-to-end process of designing, developing, and deploying responsive and secure web applications. By covering Internet fundamentals, HTML, CSS, JavaScript, and advanced practices such as SEO, security policies, and deployment, the course bridges foundational knowledge with practical industry-oriented skills. Students will gain hands-on experience in building interactive and responsive websites, preparing them for professional roles in web development.
Course Objectives :	By the end of this course, Students will be able to: 1. Understand the fundamentals of the web ecosystem including Internet protocols, client-server architecture, browsers, hosting, and domains, along with structured webpage creation using HTML. 2. Design and style interactive web pages using semantic HTML elements and a variety of CSS techniques, including layout models, responsive design, and accessibility considerations. 3. Develop interactive functionality with JavaScript by applying programming constructs, object-oriented concepts, and array manipulation for dynamic web applications. 4. Integrate user interactivity and external services through DOM manipulation, event handling, form validation, asynchronous programming, and API integration. 5. Apply optimization, security, and deployment practices such as performance tuning, SEO techniques, CORS and Content Security Policies, and preparing project documentation with a fully functional web application demo.
